Amendments to the Claims:

This listing of claims replaces all prior versions, and listings, of the claims in the application.

Listing of Claims:

1.   (Currently amended) A method of processing an audio signal comprising acts of:
        receiving an audio signal,
        extracting musical features from the audio signal, [[and]]
        translating the extracted musical features into metadata, the metadata comprising an
        instruction set of a markup language,
        transmitting the instruction set to a browser,
        receiving markup language assets, and
        rendering the markup language assets in synchronization with the received audio signal.

2.   (Currently amended) The method according to claim 1 further comprising ~~am~~ an act of
storing the metadata.

3.   (Previously presented) The method according to claim 2, wherein the storing act
comprises the act of storing the metadata with associated time data.

4.   (Currently amended) The method according to claim 3, wherein the time data defines ~~the~~
a start time and ~~the~~ a duration, relative to the received audio signal, ~~of each~~ for a markup
language term in the instruction set.

5.   (Canceled) The method according to claim 1, further comprising an act of transmitting
the instruction set to a browser.

6.   (Canceled) The method according to claim 1, further comprising an act of receiving
markup language assets.

7.   (Canceled) The method according to claim 6, further comprising an act of rendering the markup language assets in synchronization with the received audio signal.

8.   (Previously presented) The method according to claim 1, wherein the musical features extracted from the audio signal include one or more of tempo, key and volume.

9.   (Currently amended) A system for processing an audio signal, comprising:
        an input device for receiving an audio signal; [[and]]
        a processor for extracting musical features from the audio signal and for translating the extracted musical features into metadata, the metadata comprising an instruction set of a markup language;
        an output device for outputting the received audio signal; and
        a browser distributed amongst a set of devices, the browser arranged to receive an instruction set of the markup language and markup language assets and to control the set of devices, thereby rendering the markup language assets in synchronization with the received audio signal.

10.   (Previously presented) The system according to claim 9, further comprising a storage device for storing the metadata.

11.   (Canceled) The system according to claim 9, further comprising an output device for outputting the received audio signal.

12.   (Canceled) The system according to claim 9, further comprising a browser distributed amongst a set of devices, the browser arranged to receive an instruction set of the markup language and to receive markup language assets and to control the set of devices accordingly.
